Passing List to Function

We can pass a list to a function while calling function.

```python
def show(l):
        print(l)
        print(type(l))
        for i in l:
                print(i)

lst = [10, 20, 30, 'GeekyShows']
show(lst)
```
